IntelisisCitas

API for managing service appointments attached to Intelisis.

Authenticator

Authenticator
POST

Auth

https://apinissan-dev.intelisis-solutions.com:8443/api/Auth/

Action to authenticate.

Endpoint for vehicles `api/Auth/`

In this endpoint the authentication of the user and generation of its token can be performed.

Request Params

Parameter	Description
username	Account name
password	Assigned by the user
idDistribuidor	Identifier of the distributor to which the user belongs.

Response Params

Parameter	Description
token	User's token
status	Transaction status
idDistribuidor	Identifier of the distributor to which the user belongs

Error Response

Response code	Description
0	Succesful transaction
1	User does not exist
2	Invalid password

Example of succesful transaction

```
{
    "token": "X",
    "IdDistribuidor": 76,
    "status": "0"
}
```

PARAMS

BODY formdata

username

password

IdDistribuidor

```
Example Request

                                                                    Auth

var formdata = new FormData();
formdata.append("username", "");
formdata.append("password", "");
formdata.append("IdDistribuidor", "");

var requestOptions = {
  method: 'POST',
  body: formdata,
  redirect: 'follow'
};

fetch("https://apinissan-dev.intelisis-solutions.com:8443/api/Auth/", requestOptions)
  .then(response => response.text())
  .then(result => console.log(result))
  .catch(error => console.log('error', error));
```

Catalogs

POST

Vehicles

https://apinissan-dev.intelisis-solutions.com:8443/api/vehiculos/

Vehicle catalog

Endpoint for vehicles `api/vehiculos/`

In this endpoint the vehicles that exist within analysis by model will be presented.

Request Params

Parameter	Description
idsucursal	Branch identifyer

Response Params

Parameter	Description
message	Personalized message
status	Query status
data	Data collections with the query result

Data collections structure

Parameter	Description
Clave	Vehicle's model code
Descripcion	Description of the vehicle's model

Error Response

Response code	Description
0	Succesful transaction
1	Branch does not exist
2	Non-optimal branch configurations to obtain vehicle by model

Example of succesful answer

```
{
    "data": [
        {
            "Clave": "350Z",
            "Descripcion": "350Z"
        },
        {
            "Clave": "A32",
            "Descripcion": "MAXIMA"
        },
        ...
    ],
    "status": "0",
    "message": "OK"
}
```

HEADERS

Authorization

  body: raw,
  redirect: 'follow'
};

fetch("https://apinissan-dev.intelisis-solutions.com:8443/api/vehiculos/",
requestOptions)
  .then(response => response.text())
```

POST

CategoriasServicio

https://apinissan-dev.intelisis-solutions.com:8443/api/categorias/

Service Categories Catalog

Endpoint for vehicles `api/categorias/`

*   In this endpoint the categories that exist within Intelisis will be presented. *

Request Params

Parameter	Description
idsucursal	Dealer code

Response Params

Parameter	Description
message	Personalized message
status	Query status
data	Data collections with the query result

Data collections structure

Parameter	Description
Categoria	Category name

Error Response

Response code	Description
0	Succesful transaction
1	Client does not exist
2	Branch configurations not optimal for obtaining the categories.

Succesful response example

```
{
    "data": [
        {
            "Categoria": "Mantenimiento"
        },
        {
            "Categoria": "Reparacion"
        }
    ],
    "status": "0",
    "message": "OK"
}
```

HEADERS

Authorization

};

fetch("https://apinissan-dev.intelisis-solutions.com:8443/api/categorias/",
requestOptions)
  .then(response => response.text())
```

POST

TiposServicio

https://apinissan-dev.intelisis-solutions.com:8443/api/tipos/

Service Types Catalog

Endpoint for vehicles `api/tipos/`

*   In this endpoint, the types of service will be presented, which will be loaded informatively at the appointment and are managed within Intelisis. *

Request Params

Parameter	Description
idsucursal	Dealer code

Response Params

Parameter	Description
message	Personalized message
status	Query status

Parameter	Description
data	Data collections with the query result

Data collections structure

Parameter	Description
Clave	Service type key
Descripcion	Service type description
Grupo	Category to which it belongs.

Error Response

Response code	Description
0	Succesful transaction
1	Branch does not exist
2	Branch configurations not optimal for obtaining the types of service

Succesful response example

```
{
    "data": [
        {
            "Clave": "NSERV10KM",
            "Descripcion": "SERVICIO DE 10 MIL KM",

```

Client

POST

CrearCliente

https://apinissan-dev.intelisis-solutions.com:8443/api/crearcliente/

Action for the creation of appointments

Endpoint for vehicles `api/creacliente/`

In this endpoint new clients to the Intelisis system will be registered

Request Params

Parameter	Description
idsucursal	Dealer ID
nombre	Client's maiden name(s)
apaterno	Client's paternal last name
amaterno	Client's maternal last name
cp	Client's zip code
email	Client's e-mail
telefono	Client's phone number

Response Params

Parameter	Description
message	Query status
status	Query status
data	Data collections with the query result

Data collections structure

Parameter	Description
Cliente	Client's code in Intelisis

Error Response

Response code	Description
0	Succesful transaction
1	Client does not exist
2	Client settings not optimal for obtaining the types of service in your branch

Ejemplo de respuesta exitosa

```json
{
    "data": [
        {
            "Cliente": "SKS1"
        }

POST

ObtenerCliente

https://apinissan-dev.intelisis-solutions.com:8443/api/cliente/

Client settings not optimal for obtaining the types of service in your branch

Endpoint for vehicles `api/cliente/`

In this endpoint the key client's key is obtained in the Intelisis system.

Request Params

Parameter	Description
idsucursal	Dealer ID
nombre	Client's maiden name(s)
apaterno	Client's paternal last name
amaterno	Client's maternal last name

Response Params

Parameter	Description
message	Query status
status	Query status
data	Data collections with the query result

Data collections structure

Parameter	Description
Cliente	Intelisis client code
Nombre	Full name of client in Intelisis.

Error Response

Response code	Description
0	Succesful transaction
1	Client does not exist
2	Customer settings not optimal for obtaining the types of service in your branch

Succesful response example

```
{
    "data": [
        {
            "Cliente": "SKS2",
            "Nombre": "PEDRO RODRIGUEZ LOPEZ"
        }
    ],
    "status": "0",
    "message": "OK"
```

```
}
```

Appointments

Actions on appointments

POST

ObtenerCalendario

https://apinissan-dev.intelisis-solutions.com:8443/api/calendario/

Action to obtain the available days of service.

Endpoint for vehicles `api/calendario/`

In this endpoint, the available hours to create appointments will be presented.

Request Params

Parameter	Description
idsucursal	Dealer ID
mes	Month to consult
anio	Year to consult

Response Params

Parameter	Description
message	Personalized message
status	Query status
data	Data collections with the query result

Data collections structure

Parameter	Description
Agente	Agent's name
Fecha	Available date

Error Response

Response code	Description
0	Succesful transaction
1	Client does not exist
2	Customer settings not optimal for obtaining the types of service in the branch

Succesful response example

```
{
    "data": [

POST

CrearCita

https://apinissan-dev.intelisis-solutions.com:8443/api/creaCitas/

Action for the creation of appointments

Endpoint for vehicles `api/creaCitas/`

In this endpoint, appointments sent from the client to save them and affect them within the analysis linked to a client, will be recorded.

Request Params

Parameter	Description
cliente	Client ID
idsucursal	Dealer ID
dia	Requested appointment date
agente	Service agent's ID
hora	Requested appointment time
tipo	Type of selected service
observaciones	Text field loaded for observations
Km	Mileage
vehiculo	Car catalog identifier

Parameter	Description
servicioserie	Vehicle's VIN
servicioplacas	Vehicle's plate number
serviciomodelo	Vehicle's make
articulopaquete	Car catalog identifier

Response Params

Parameter	Description
message	Query status
status	Query status
data	Data collections with the query result

Data collections structure

Parameter	Description
Folio	Confirmed appointment folio
OkRef	Message variable on successful execution
IdlogIntelisis	Appointment record identifier in temporary table before affecting appointment

Error Response

Response code	Description
0	Succesful transaction
1	Client does not exist
2	Customer settings not optimal for obtaining the types of service in branch

Example of succesful response

```
{
    "data": [
        {
            "Folio": "TU4308",
            "OkRef": "",
            "IdlogIntelisis": 2537
        }
    ],
    "status": "0",
    "message": "OK"
}
```
